## Evening Brief

Date: Saturday, July 29, 2017

---

### Weather Summary

## Weather:

### \*\*\* Near Record Breaking Heat This Week \*\*\*

Temperatures will warm region wide through the weekend with western valley highs back near 100 degrees. ***Isolated thunderstorms will linger in northern NV and portions of the west/central Idaho mountains Sunday.*** Most of these showers and storms will be on the wetter side. We have issued ***High Risk for areas that will see near record heat and critically dry RH.***

---

### Preparedness Levels

**At 00:01 7/30/17 Great Basin will change to a PL 3**

Great Basin	4
National	4

---

### Great Basin Fire Activity (from Irwin): Light Activity

**New Fires and Acres: 23 fires for 78.74 acres 497 acres large fire growth**

---

### Resources:

- Crews: 18 T1 IHCs in GB: 8 committed, 2 R&R, 8 available.
- T2 IMT Team 4 – Roide is committed to the Missouri Fire.
- T2 IMT Team 6 - Chadwick committed to the Preacher Fire
- NW T2 IMT Johnson committed to the Mahogany and Leonard Creek Fires
- GBCC has committed an estimated 66 + type 3, 4, 6 engines.
- 5-T1 and 6-T2 helicopters are available in GACC.

---

### Great Basin Fire Potential Summary

Fuels continue to moisten across much of the region, as we are several days into monsoonal activity. The most rapid moistening occurred across Central and Eastern Nevada, where the most widespread precipitation has occurred over the past few days. Lighter fuels, represented by 10-hr FM have seen the most rapid moistening over the past few days.

ERC's will remain critical over much of Idaho, but also have begun to edge downwards slightly in response to the more humid conditions.

Great Basin  
Coordination Center

Fire danger remains elevated across far western and northern portions of the Great Basin, and it will be these areas that will dry out the quickest early this week during the upcoming heatwave.

Sagebrush live fuel moisture, which has a much slower response time to short term precipitation, has been on a rapid downward trend the past few weeks in most areas, finally reaching near to just below normal mid-summer levels across the northern and western portions of the Great Basin. Sagebrush live fuel moisture across Central NV/Utah has dropped significantly to below normal and in some areas is approaching record lows.

We have issued a Great Basin *Fuels and Fire Behavior Advisory for Nevada and Utah*, available at the following link:

[https://www.predictiveservices.nifc.gov/fuels\\_fire-danger/GB\\_Fuels\\_and\\_Fire\\_Behavior\\_Advisory.pdf](https://www.predictiveservices.nifc.gov/fuels_fire-danger/GB_Fuels_and_Fire_Behavior_Advisory.pdf)

## Current Incident Details
